

TGL2927-SM

2 – 4 GHz 200 Watt VPIN Limiter

Product Overview

The Qorvo TGL2927-SM is a high-power receive protection circuit (limiter) operating from 2-4 GHz. Capable of withstanding up to 200 W incident power levels, the TGL2927-SM allows < 18 dBm flat leakage to pass through and contributes < 0.6 dB in insertion loss.

Using Qorvo's passive GaAs VPIN technology, the TGL2927-SM does not require bias and is offered in a small 4 x 4 (mm) plastic overmold package. This simplifies system integration while maximizing performance and protection.

The TGL2927-SM is ideal for commercial and military radar applications where protecting sensitive receive components from damage is critical.

Lead-free and RoHS compliant.

Evaluation Boards available on request.

Evaluation Board (EVB) and Mounting Detail

Package mounting detail

RF Layer is 0.010" thick Rogers Corp. RO4003C, $\epsilon_r = 3.38$. Metal layers are 0.5 oz. copper. The microstrip line at the connector interface is optimized for the Southwest Microwave end launch connector 1092-02A-5.

The trace pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead tolerances. Since processes vary from company to company, careful process development is recommended.

For pulsed applications, only. Increased pulse width and/or duty cycle results in lower power handling capability of the EVB.

Notes:

1. Ground / thermal vias under the DUT are critical for the proper performance of this device.
2. The EVB shown herein utilizes copper filled vias (10 mil diameter) under the DUT to maximize heat transfer away from the DUT under large signal conditions.
3. Thermal dissipation is low for normal non-limiting operation.

Pad Configuration and Description

Pad No.	Label	Description
1, 2, 4 - 13, 15 - 20	NC	No connection. Recommend connecting to ground at EVB level may improve performance
3	RF Input	RF Input, matched to 50 Ohms, DC coupled
14	RF Output	RF Input, matched to 50 Ohms, DC blocked
21	GND	On PCB, multiple copper-filled vias should be employed under the center pad to minimize inductance and thermal resistance

NOTE: The RF Input and RF Output ports are not interchangeable.
