

Applications

- CATV Line Amplifiers
- CATV System Amplifiers
- Distribution Nodes
- Green Applications

Product Features

- 75 Ω , 40 – 1000 MHz Bandwidth
- GaAs pHEMT & MESFET Technology
- User Configurable Gain: 21 – 27 dB
- Integrated Linearization
- Flexible Bias Voltage and Current for Optimum Efficiency
- SOIC-16 Wide Package

SOIC-16 Wide Package

Functional Block Diagram

General Description

The TAT8857A1H is a cost effective 75 Ω RFIC Amplifier designed for use in Doubler CATV applications up to 1000 MHz. It works with readily available SMT baluns and transformers to provide a highly flexible low cost replacement for traditional hybrids.

Gain of the TAT8857A1H may be easily adjusted by varying external components, allowing for a family of Doubler solutions to be developed from a single RFIC.

The TAT8857A1H provides integrated linearization to improve the 3rd order distortion performance.

The TAT8857A1H may be protected against transient surges with the TQP200002 and an output high pass filter network. Consult TriQuint for discussion.

The TAT8857A1H supports traditional +24 V and +12 V supply voltages. Bias current may be adjusted to suit particular requirements with standard or active biasing approaches. Consult TriQuint for further discussion.

Pin Configuration

Pin No.	Label	Pin No.	Label
1	OUT 1A	10	IN 2B
2	LIN ADJ A	11	OUT 2B
3	IN 1A	12	GATE B
4	BIAS 1A	13	GATE A
5	BIAS 1B	14	OUT 2A
6	IN 1B	15	IN 2A
7	LIN ADJ B	16	BIAS 2A
8	OUT 1B	Backside Paddle	RF/DC GND
9	BIAS 2B		

Ordering Information

Part No.	Description
TAT8857A1H	CATV Doubler RFIC
TAT8857A1H-PCB 24V	40 – 1000 MHz Eval. Board
TAT8857A1H-PCB 12V	40 – 1000 MHz Eval. Board

Standard T/R size = 1000 pieces on a 7" reel

Absolute Maximum Ratings

Parameter	Rating
Storage Temperature	-65 to 150 °C
Operation of this device outside the parameter ranges given above may cause permanent damage.	

Recommended Operating Conditions

Parameter	Min	Typ	Max	Units
Supply Voltage (V_{CC})		24		V
I_{CC}		350		mA
T_{CASE}	-20		+115	°C
T_J (for $>10^6$ hours MTTF)			+150	°C

Electrical performance is measured and guaranteed under conditions noted in the electrical specifications table. Specifications are not guaranteed over all recommended operating conditions.

Electrical Specifications

Test conditions unless otherwise noted: $V_{CC} = +24V$, Temp. = +25°C, 75 Ω system.

Parameter	Conditions	Min	Typ	Max	Units
Operational Frequency Range		40		1000	MHz
Test Frequency			40		MHz
Gain			25		dB
Input Return Loss			18		dB
Output Return Loss			17		dB
Output P1dB	f = 500 MHz		+31		dBm
Output IP3	f1 = 225 MHz, f2 = 325 MHz, Pout = +15 dBm/tone		+52		dBm
Composite Triple Beat ⁽¹⁾			-73		dBc
Composite Second Order ⁽¹⁾			-74		dBc
Composite Intermodulation Noise ⁽¹⁾			60		dB
XMOD ⁽¹⁾			-68		dBc
Noise Figure			4.0		dB
V_{bias}			+24		V
I_{DD} ⁽²⁾			350		mA
Thermal Resistance, θ_{jc}	Module (junction to case)		3.4		°C/W

Notes:

- 79ch. NTSC + QAM (6dB offset) to 1003.25 MHz, 13dB uptilt from 55.25 MHz to 1003.25 MHz, 40 dBmV/ch at 55.25 MHz and the equivalent of 53 dBmV/ch at 1003.25 MHz.
- Active biasing is easily implemented with traditional dual-pnp approaches. Biasing at 12 V is also possible.

Detailed Device Description

The TAT8857A1H is similar to other parts offered on the market; it contains two separate amplifiers. A major difference is the TAT8857A1H allows much flexibility to set gain and bias to cover multiple applications without an additional stage. This makes it ideal for green designs. It uses a cost effective high voltage MESFET technology (designed for CATV) and a pHEMT process (developed for high-volume applications). On-chip linearization is also utilized.

Bias Current Adjustment

Bias current is determined by 2 settings:

1. Size of DC feedback resistors – decreasing R1 & R2 will increase I_{DD}
2. Tail resistors - decreasing R21 will increase I_{DD} , but lead to wider variations

Active biasing schemes are possible but not necessary for most applications.

Best performance is with $I_{DD} = 350\text{mA}$

Voltage Biasing: +24 V and +12 V

The TAT8857A1H has two amplifiers which can be configured to split a +24 V supply (and share the same current) or both amplifiers can be biased from a +12 V supply and draw current independently.

Detailed Device Description (contd.)

For +24 V operation, select values for the resistor divider network (R18,R19) that will yield the desired gate voltage (Vgate).

R18 should be restricted to 2.7 kOhms or less to prevent gate leakage currents in the output FET from affecting Vgate.

Do not put any capacitance on Vgate as this could result in a turn-on over-voltage condition that could damage the output FET.

Evaluation Board PCB Information

TriQuint PCB 1077901 Material and Stack-up +24 V

TriQuint PCB 50-0191 Material and Stack-up +12 V

Package Marking and Dimensions

Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Dimension and tolerance formats conform to ASME Y14.4M-1994.
3. The terminal #1 identifier and terminal numbering conform to JESD 95-1 SPP-012.

PCB Mounting Pattern

Notes:

1. All dimensions are in millimeters. Angles are in degrees.
2. Use 1 oz. copper minimum for top and bottom layer metal.
3. A heat sink underneath the area of the PCB for the mounted device is strictly required for proper thermal operation. Damage to the device can occur without the use of one.
4. Vias are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation.
5. Do not remove or minimize via hole structure in the PCB. Thermal and RF grounding is critical.
6. We recommend a 0.35mm (#80/.0135") diameter bit for drilling via holes and a final plated thru diameter of 0.25 mm (0.10").
7. Ensure good package backside paddle solder attach for reliable operation and best electrical performance.

Product Compliance Information

ESD Sensitivity Ratings

Caution! ESD-Sensitive Device

ESD Class: 0B
Volt. Range: ≥ 125 V to < 250 V
Test: Human Body Model (HBM)
Standard: JEDEC Standard JS-001-2012

MSL Rating

MSL Rating: Level 3
Test: 260°C convection reflow
Standard: JEDEC Standard IPC/JEDEC J-STD-020

Solderability

Compatible with both lead-free (260 °C max. reflow temperature) and tin/lead (245 °C max. reflow temperature) soldering processes.

Contact plating: Matte Tin

RoHS Compliance

This part is compliant with EU 2002/95/EC RoHS directive (Restrictions on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment).

This product also has the following attributes:

- Halogen Free (Chlorine, Bromine)
- Antimony Free
- TBBP-A (C₁₅H₁₂Br₄O₂) Free
- PFOS Free
- SVHC Free
