

QPA2210D

27 – 31 GHz 7 Watt GaN Power Amplifier

Product Overview

Qorvo's QPA2210D is a Ka-band power amplifier fabricated on Qorvo's 0.15 μm GaN on SiC process (QGaN15). Operating between 27 and 31 GHz, it achieves 2.5 W linear power with -25 dBc intermodulation distortion products and 25 dB small signal gain. Saturated output power is 7 W with power-added efficiency of 32%.

QPA2210D is ideally suited to support satellite communications and 5G infrastructure.

To simplify system integration, the QPA2210D is fully matched to 50 ohms with integrated DC blocking caps on both I/O ports.

The QPA2210D is 100% DC and RF tested on-wafer to ensure compliance to electrical specifications.

Lead-free and RoHS compliant.

Assembly Notes

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.

Reflow process assembly notes:

- Use AuSn (80/20) solder and limit exposure to temperatures above 300 °C to 3 – 4 minutes, maximum.
- An alloy station or conveyor furnace with reducing atmosphere should be used.
- Do not use any kind of flux.
- Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonic are critical parameters.
- Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
