

QPM1021

10 – 12 GHz 100 W GaN Power Amplifier

Product Overview

Qorvo's QPM1021 is a packaged, high power amplifier fabricated on Qorvo's production 0.15 μm GaN on SiC process. The QPM1021 operates from 10–12 GHz and provides 100 W (50 dBm) of saturated output power with 20 dB of large signal gain and greater than 32 % power-added efficiency.

The QPM1021 is packaged in a 10-lead 19.05 x 19.05 mm bolt-down package, with a pure copper base for superior thermal management. Both RF ports are internally DC blocked and matched to 50 ohms allowing for simple system integration.

The QPM1021 is ideally suited for both commercial and military radar systems, satellite communications systems, and data links.

Lead-free and RoHS compliant.

Applications Information

Notes:

1. V_G & V_D need to be biased from both sides.

Bias-Up Procedure

1. Set I_D limit to 17 A (peak), I_G limit to 60 mA
2. Set V_G to -5.0 V
3. Set V_D +28 V
4. Adjust V_G more positive until $I_{DQ} = 2.0$ A, peak
5. Apply RF signal

Bias-Down Procedure

1. Turn off RF signal
2. Reduce V_G to -5.0 V. Ensure $I_{DQ} \sim 0$ mA
4. Set V_D to 0 V
5. Turn off V_D supply
6. Turn off V_G supply

Assembly Notes

1. Carefully clean the PC board and package leads with alcohol. Allow it to dry fully.
2. To improve the thermal and RF performance, Qorvo recommends attaching a heat sink to the bottom of the PCB and apply thermal compound (Arctic Silver 5 recommended) or a 4 mil indium shim between the heat sink and the package.
3. (The following is for information only. There are many variables in a second level assembly that Qorvo does not control, so Qorvo does not recommend an absolute torque value.) Use screws to attach the component to the heat sink. A suggested final torque value is 16 in-oz. for a 0-80 screw. Start with screws finger tight, then torque to 8 in-oz., then torque to final value. Use the following tightening pattern:

4. Apply no-flux solder to each pin of the QPM1021. The component leads should be manually soldered, and the package should not be subjected to conventional reflow processes. The use of no-clean solder to avoid washing after soldering is recommended.
