

Product Description

Qorvo's TGA2958 is a driver amplifier fabricated on Qorvo's QGaN15 GaN on SiC process. The TGA2958 operates from 13 – 18 GHz and achieves 2 W of saturated output power with > 21 dB of large signal gain and at least 25% power-added efficiency.

The TGA2958 is an ideal choice to drive Qorvo's high performing Ku-band GaN HPA's allowing the user to operate the driver and HPA off similar voltage rails.

Fully matched to 50 ohms with integrated DC blocking capacitors on both I/O ports, the TGA2958 is ideally suited for a variety of military and commercial radar and communications applications.

Lead free and RoHS compliant.

Evaluation Boards are available upon request.

Assembly Notes

Component placement and adhesive attachment assembly notes:

- Vacuum pencils and/or vacuum collets are the preferred method of pick up.
- Air bridges must be avoided during placement.
- The force impact is critical during auto placement.

Reflow process assembly notes:

- Use AuSn (80/20) solder and limit exposure to temperatures above 300°C to 3-4 minutes, maximum.
- An alloy station or conveyor furnace with reducing atmosphere should be used.
- Do not use any kind of flux.
- Coefficient of thermal expansion matching is critical for long-term reliability.
- Devices must be stored in a dry nitrogen atmosphere.

Interconnect process assembly notes:

- Thermosonic ball bonding is the preferred interconnect technique.
- Force, time, and ultrasonic are critical parameters.
- Aluminum wire should not be used.
- Devices with small pad sizes should be bonded with 0.0007-inch wire.
